Product Name :
Differential With Lock ASR

Product Code :
LBNY-0005-12000047

Description :

ASR then shifts from differential brake control to engine control to reduce engine power. The ASR activates the differential brake valve to control the brake cylinder, and the engine's driving torque is applied to the braked wheel. The ECU activates the ASR when the wheels' rotation exceeds the slip threshold.

Demonstration:

Function of differential spider gears
Function of axle drive (pinion, crown wheel)
Locking by hydraulic piston and multiple-discs.

Technical Specification :

Differential With Lock ASR
